toot.ai
an explainable AI assistant

Why?

LACK OF TIMELY AND GLOBALLY CONSISTENT REGULATION

TRUST AND PRIVACY GAP

SLOWING PROGRESS

Go-to-market

First, collaboration with an international MSP to work on finalizing the prototype;
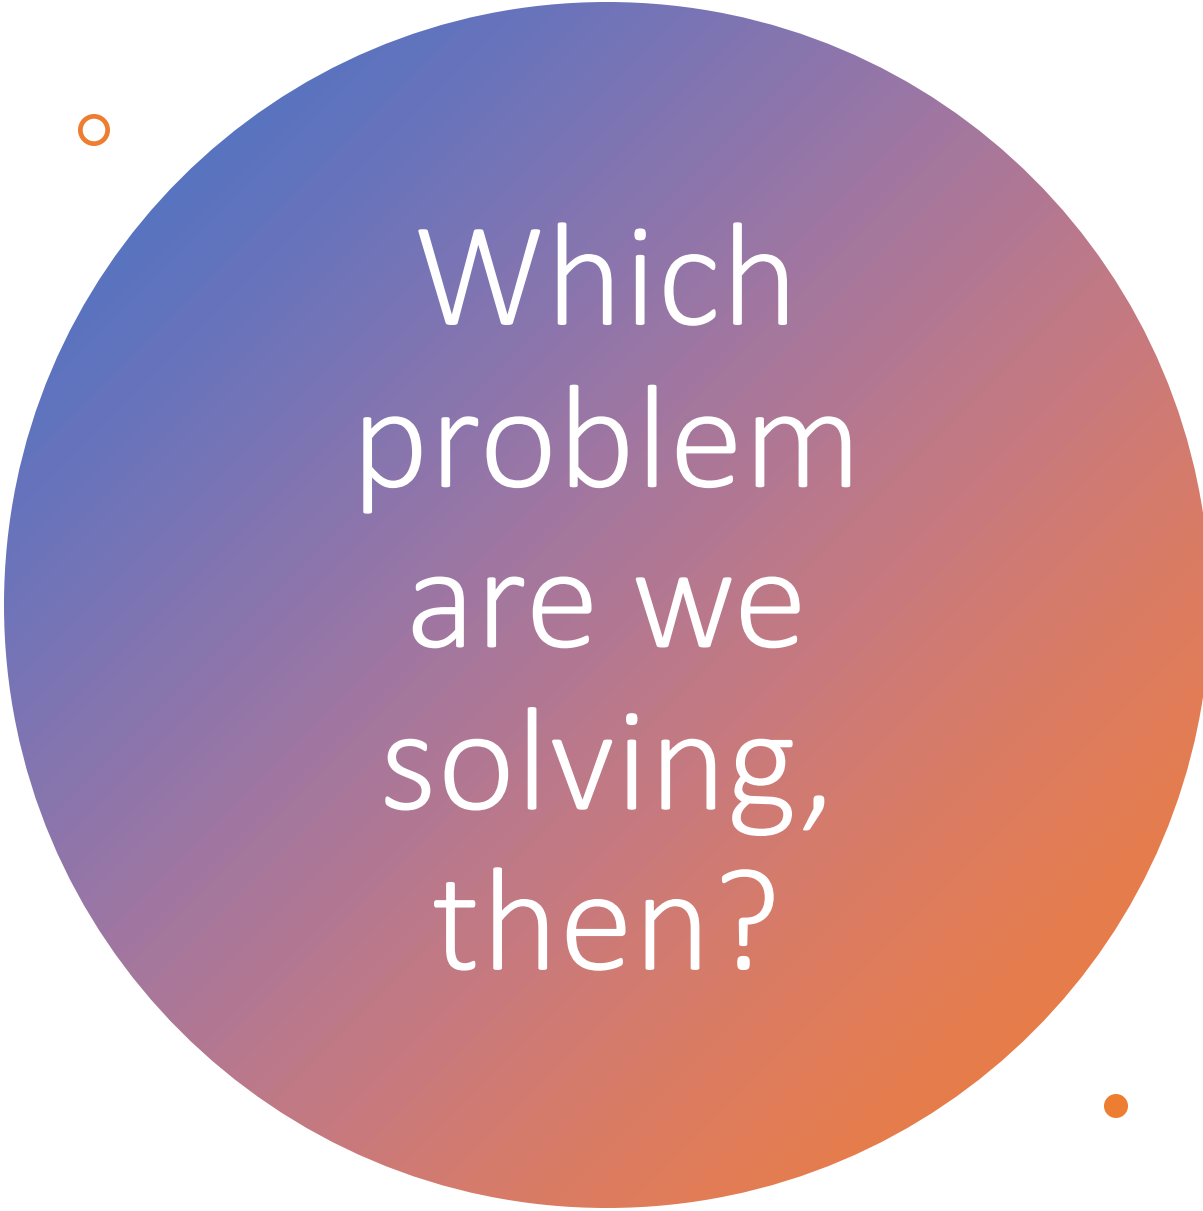

Next, generalization on the learned knowledge by creating domain/task-specific models;

Then, expansion of the knowledge space from MSPs to all businesses that are wishing and willing to automate any task they have;

Finally, with accurate (enough) models and a robust framework for creating and using those models, we open the system to the world and individuals as a personal assistant;
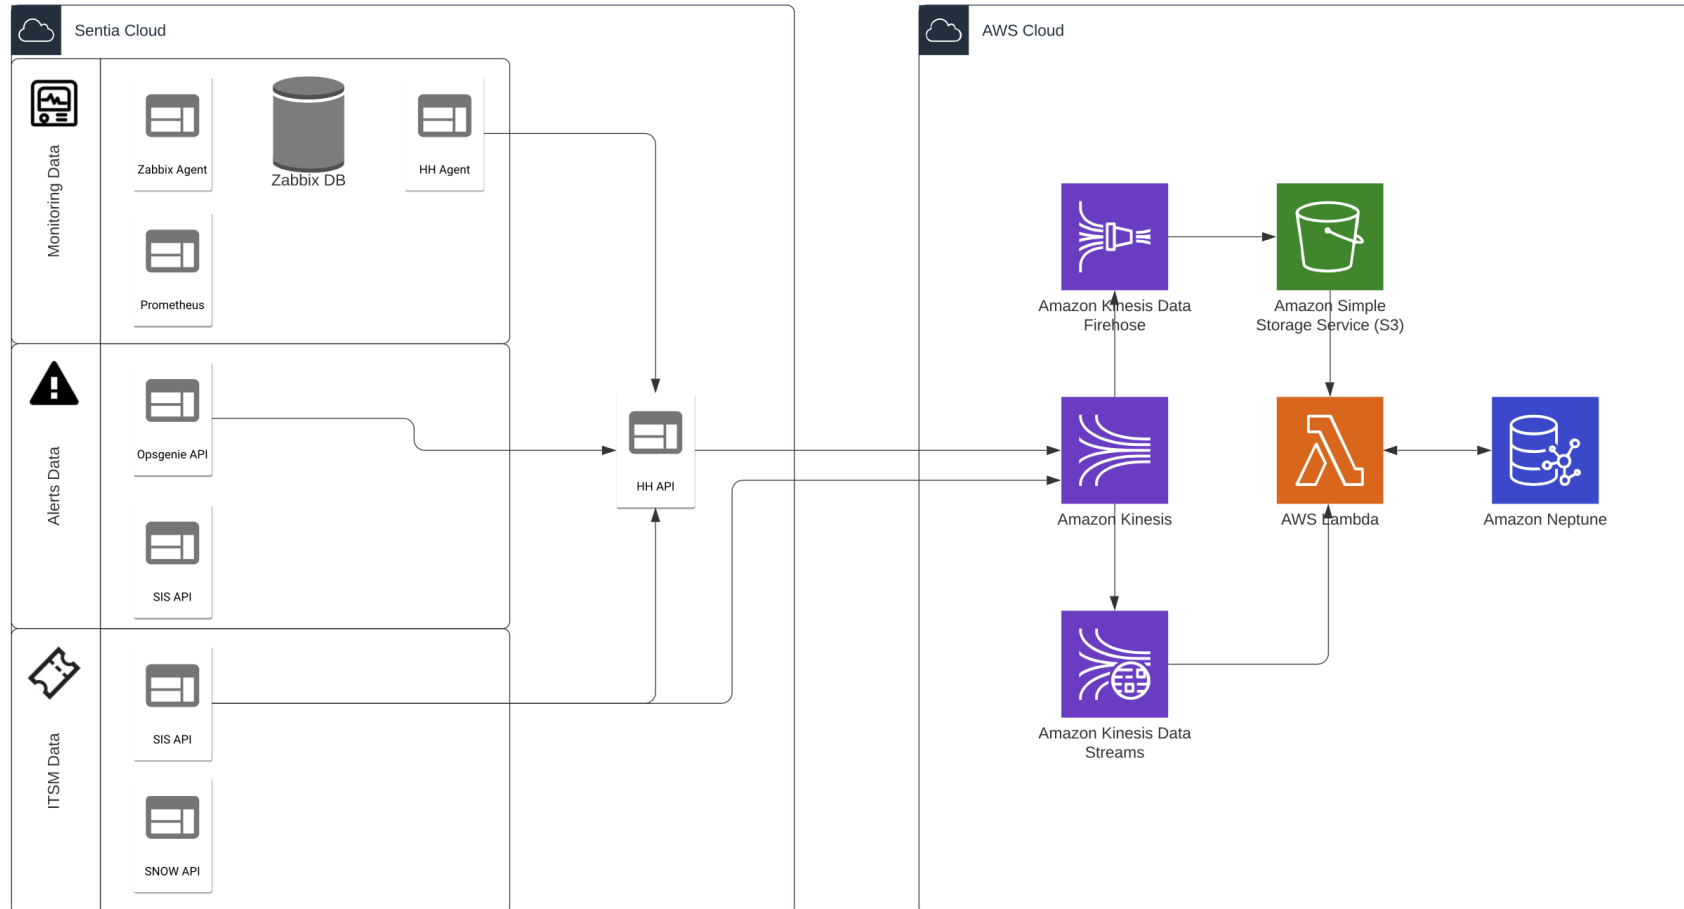

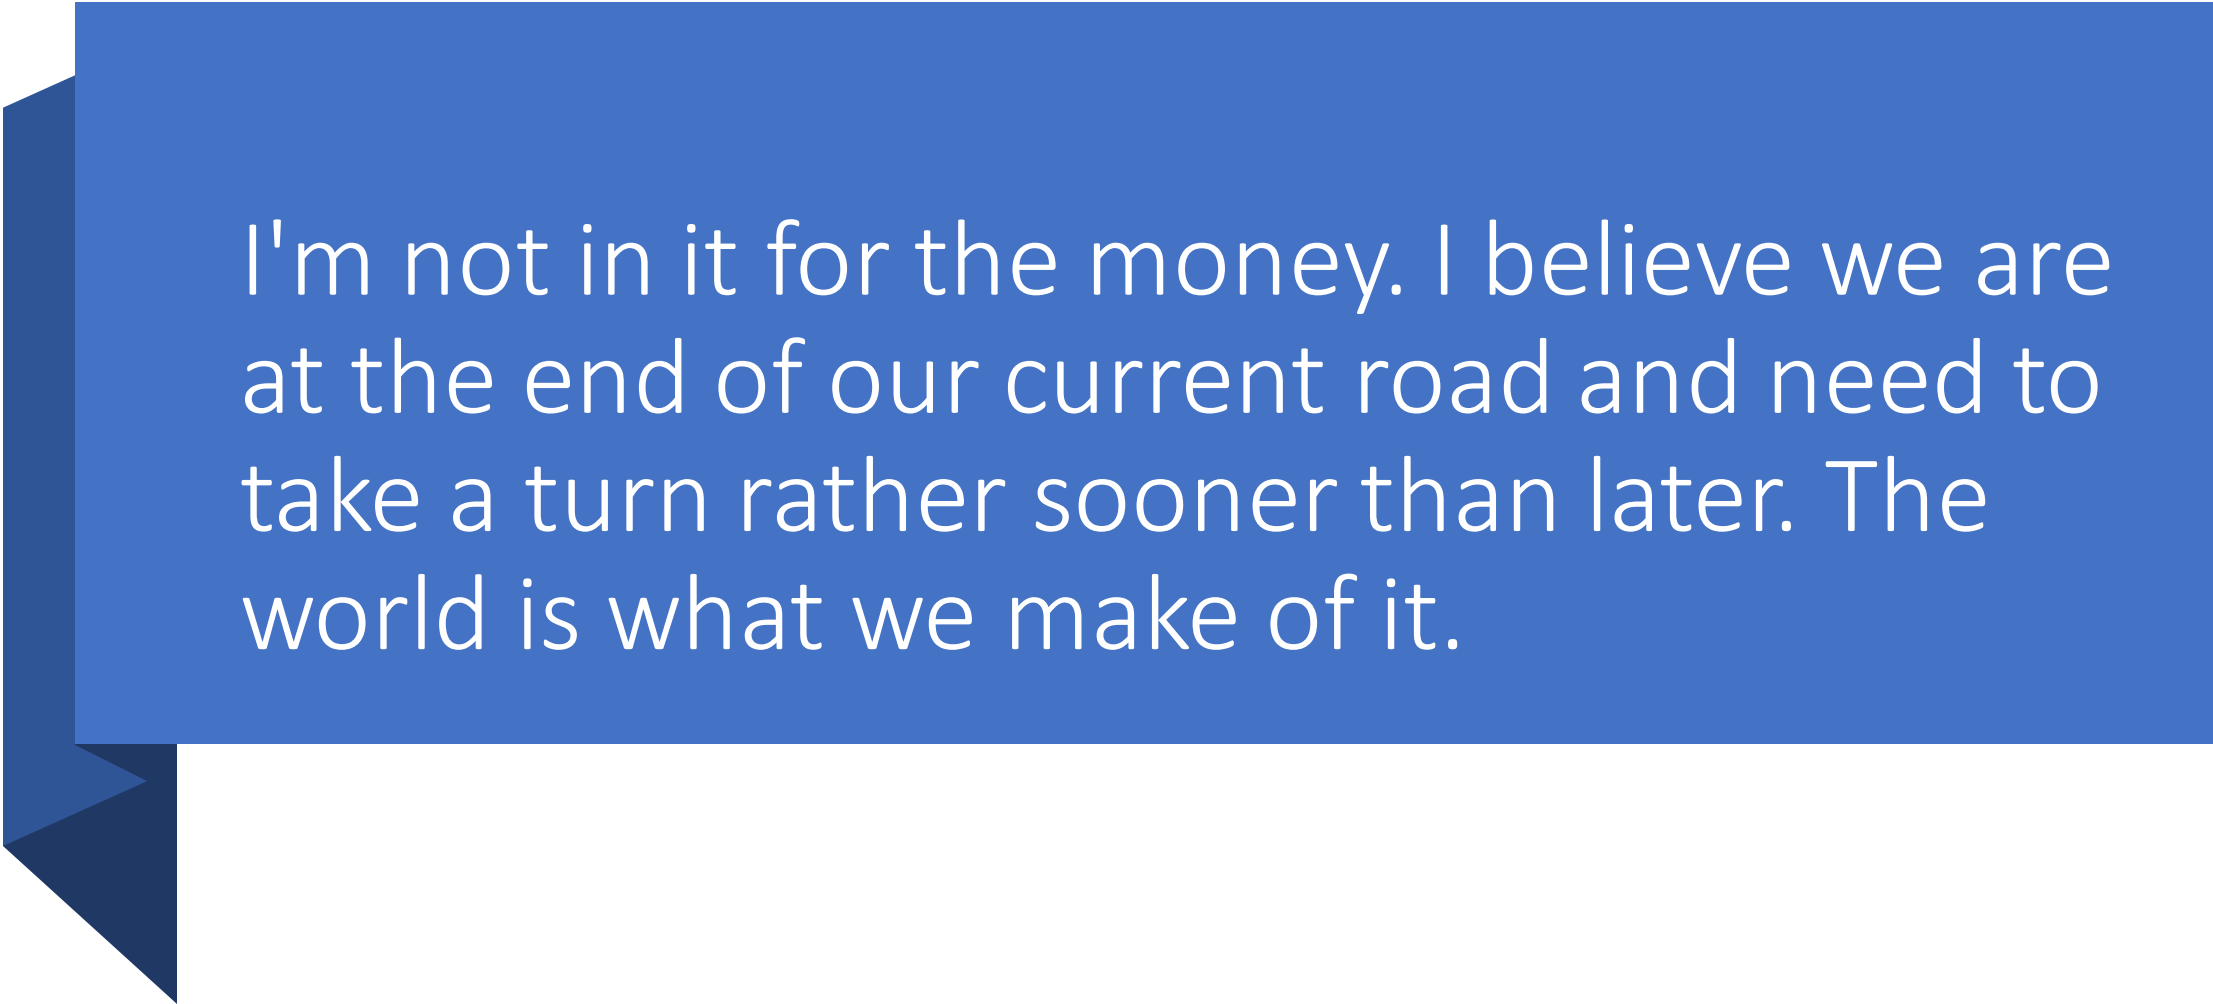

Which problem are we solving, then?

Ontology learning

Prototype Architecture

IT SME Monitoring Issues

I'm not in it for the money. I believe we are at the end of our current road and need to take a turn rather sooner than later. The world is what we make of it.
